

ULTRA 5500

Double Hung

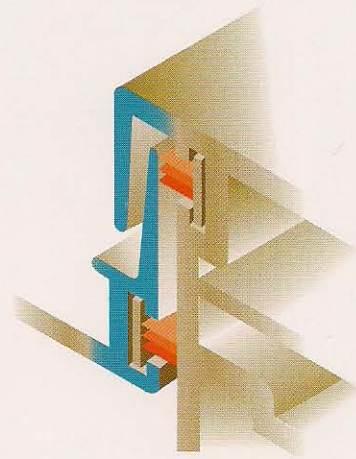

VERSATILE, ELEGANT
WINDOWS: BRING
OUT THE BEST IN
YOUR HOME

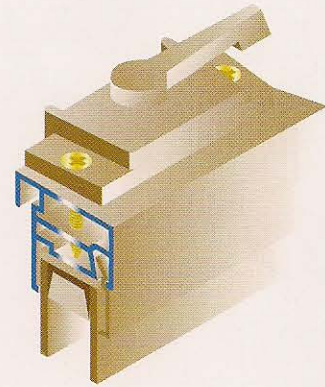

Qualities you need with the beauty you want

Vinyl windows allow an effortless tilt-in operation and smooth sash movement, with no warping or swelling.

Positive interlock with dual weather seals reduces air and water infiltration.

Hardware screws penetrate two vinyl walls to provide greater stability.

Old or new, your home deserves the best—especially when it comes to your windows. So we designed our low-maintenance vinyl windows with the qualities you want, in beautiful, complementary styles and colors. And the craftsmanship we build into them, like fusion-welded corners, adds to their durability and energy efficiency.

- Sash and frame corners are miter cut and fusion welded, eliminating joints that may loosen or leak.
- Streamlined design narrows the vinyl profiles and recesses the tilt latches, leaving a larger glass area to yield more light.
- Literally "care free," our windows resist corrosion from pollutants, never need painting and can be cleaned with soap and water.
- Our 3/4" glass unit means less condensation and greater energy savings.

Operating windows can be combined with fixed windows and architectural shapes to create a variety of styles.
